

ECOPIXEL SUSTAINABLE MATERIAL

MADE IN ITALY

Image from products ALEX chaise longue, designed by Alessandro Mendini at the Rossana Orlandi Gallery / Milan.

PROFILE

ECOPIXEL is made up of professionals with 20 years of experience in the plastic industry and more than 5 years of research and development in the recycled plastic field.

ECOPIXEL is a manufacturing company that recycles mono-polymer plastic typology, made from 100% shredded waste material. The material is usually made with industrial thermoplastic waste but more and more also with collected material from any other field including household-waste.

Recycling a mono-polymer means the material can be melted and re-melted an infinite number of times resulting in a forever circular material and creating this way a true “cycle” in material-use. As long as a material stays “clean” (read mono-polymer) it can be transformed at the exact temperature of the polymer involved and so, the material will never “burn” and deteriorate. Keeping polymers separate is thinking also about what happens after the recycled cycle. With ECOPIXEL, after you, someone else will be able to recycle what you have recycled, so never again new extraction of raw materials will be needed.

ECOPIXEL wants to promote the idea of NEVER mixing different plastic-waste-materials so to keep the plastics “clean” and ready for reuse also after each product-lifecycle. Apart from producing products in ECOPIXEL for other companies, ECOPIXEL also exists as a design-label that promotes their own designs.

ECOPIXEL’s pre-pressurized production method and especially the maxi-flake version brings plastic recycling onto an entirely different level where the randomly pixelated appearance is brought to a precisely chosen color-pattern, and since the low melting temperature, 120 C melting point, avoids any material quality change during the process, we can speak of a “True Cycle”.

ECOPIXEL uses a thin-walled high dispersion energy saving tooling technology.

RECYCLED & RECYCLABLE

ECOPIXEL COLLECTS, SEPARATES, CHIPS INTO PIECES AND RETRANSFORMS INTO PRODUCTS, WHAT OTHERS THROW AWAY.

CIRCULARITY

ECOPIXEL is an italian manufacturing company that recycles thermoplastic waste-material in order to obtain a recycled (1) and recyclable (2) material creating this way a true *cycle in material-use.

A NEW RECYCLED MATERIAL THAT IS SUSTAINABLE

32

Materials

ECOPIXEL is a recycled thermoplastic monopolymer material. (1) 3D moulded products (2) SHEET tiles of various size thickness (3) Injected products. ECOPIXEL comes in a range of multi color & pixelated effects (except for the injected version). Following availability of waste materials it offers different possibilities.

STANDARD COLORS 2022

Wide range of Colors

From the world of "COLOR WASTE" we create melanges everyday however we depend on an unpredictable supply chain called "TRASH"

ECOPIXEL appears in different faces, even though available in unlimited combinations, is easily recognizable. Each product that is made of ECOPIXEL is unique because the pixels melt together randomly in the production process: By coincidence, the colors don't mix.

34

Effects & Finishings

Research and tests allow us to offer different effects of different surface finishing procedures on the change in surface roughness and visual textures: TRASHPLAST, PERT, TAPS, REVERSE, BLACK IS THE NEW BLACK, among others.

PRODUCTION SERVICES

MATERIAL & PRODUCT DESIGN

ECOPIXEL sheet material

STANDARD SIZE

CUSTOMIZED SHAPES
We offer full technical service to transform your idea in the needed technical drawing / tooling / prototype & sample-production. For any production we can arrange customized exclusive productions including packing and transport.

ECOPIXEL plastic injection / small size complex 3D objects

CUSTOMIZED SHAPES
We offer full technical service to transform your idea in the needed technical drawing / tooling / prototype & sample-production. For any production we can arrange customized exclusive productions including packing and transport.

ECOPIXEL PRODUCTS

GHETTO BLASTER

Designed by Jan Puylaert, ecopixel's 'ghetto blaster' is a vented bluetooth stereo offering top-quality sound in a stylish, portable design. boasting a 240 watt (120 watt AES/RMS) 5,5" coaxial speaker, the product also utilizes a new sound-absorbing material made from recycled plastics.

ECOPIXEL PRODUCT DESIGN

We develop recycled plastic materials for use in architecture and design.

ECOPIXEL is specialized in customized productions in multicolor recycled/circular plastic materials. We produce any customized project in 3D-shaped blow mouldings / Sheet materials including CNC / Injected plastics / Vacuum shaped objects.

We arrange technical follow up of your project-drawing until the toolmaking to the final production, with the possibility to arrange packaging and transport.

In our continuous research into waste plastics, we have created a new range of materials based on a 'multiple layer' concept. with this approach it is possible to create a single material that builds up in different layers. different layers with different densities or even with different structural qualities can be combined. this variation affords countless possibilities, one of which includes a sound-absorbing material.

ECOPIXEL AUDIO

Bluetooth stereo made from recycled plastics

Due to a softer, roughly shaped inner layer and a higher density, or 'stiffer', outer layer, a new material was created with high sound-absorbing capacity. this material, aptly named 'audio', proved to be ideal for loudspeaker enclosures especially since ecopixel can be shaped into any design. together with sound engineer joseph szall, an italo/hungarian specialist, the research and testing of ecopixel's new material led to a spherical-shaped stereo.

In this first edition ecopixel integrated a simple bluetooth receiver in order to enjoy music in high quality 'without instructions'. using the latest italian-made coaxial speaker units, featuring neodymium 1,5" treated silk dome-tweeters and 5,5" rubber surround double asymmetric damped cone woofer (DAR), a frequency response from 70hz to well over 20khz was achieved. the incredibly clean bass response was obtained thanks to the 'audio' material enclosure that with very little extra sound absorbing material translates the electrical input into a warm but firm and clean bass sound.

EYE

design Joseph Szall

DRUM

design by Jan Puylaert

BOUQUET

design by Jan Puylaert

BOUQUET is designed for upgradability and easy repair.

In 2021 Ecopixel develops its "BOUQUET" swivel-chair that enters as the perfect solution for being both "office-chair" and "table-chair". BOUQUET is available with or without wheels and fits perfectly into our new "sudden" home-office-world. BOUQUET offers a colorful ergonomic solution in a top of the line quality. Ecopixel, being indestructible yet soft to the touch, proves once again to be the perfect material for any furniture linked product.

Its design is modular, easy to disassemble, to swap out its components: the seat can be customized and therefore easy to adapt to the users like, makes it simple to repair and upgrade, preventing it from becoming outworn and ensuring it is kept in use for long periods of time.

ILLUMINATION

1907 FLOOR LAMP

Although “plastics” were invented long before 1800, it was not until 1907, with the invention of Bakelite, to become a common good. Bakelite was the first synthetic “plastic” material not derived from living matter and therefor available for cheap mass production. Who would have ever thought this invention would have led to the disastrous situation we live in today? Plastics seem to have ruined the world! Yet plastics are harmless as

they are wonderfully recyclable. This floor lamp, deliberately designed in the 1907 style proves that recycled plastics can be as luxurious as any other material.

CEILING LAMPS

SOLE and LUNA (half sphere)
Both come in two sizes: 30 and 16 cm of diameter

ECOPIXEL LAUNCH RELEASE AT VENTURA LAMBRATE
SALONE DEL MOBILE 2017, MILAN

CHAISE LONGUE -ALEX-

ECOPIXEL & ATELIER MENDINI

The collaboration between ECOPIXEL® (*sustainable plastic) and Atelier MENDINI has led to a remarkable plastic industry innovation where 'pixelated colors and recycled plastics' go hand in hand. Thanks to Alessandro Mendini's visionary persistence, an impressive 24x24mm 'pixel' has been developed using shredded plastic waste as a base material. His extraordinary design pushed the development of the pressurized ECOPIXEL® technique further ahead, mixing the intriguing mélange of 8 carefully selected colors randomly into the magnificent Mendini-mix, resulting in a unique appearance each time.

Alessandro Mendini / Atelier Mendini : 'King of pixelated design' has specially designed the Chaise Longue daybed 'ALEX' to commemorate the launch of ECOPIXEL®*. This iconic Memphis revival aims to be "A pièce unique" for each owner. "ALEX, my Chaise Longue, looking at Impressionism". "A chaise longue that, placed outdoors in the garden or by the pool, will blend with the colors of foliage and flowers in an impressionistic manner" Alessandro Mendini

ECOPIXEL transforms polyethylene waste into a work of 'Pointillism'. "The remarkable qualities of ECOPIXEL® has been an opportunity for powerful expression through texture and color, and has given rise to an exciting new multi-colored pixel based approach" Alessandro Mendini

Structural appearance : Powerful geometric forms are derived from a combination of polygonal plane surfaces with dynamic lineal edges. The ECOPIXEL®'s innovative 'pressurized rotational production method' enables a crisp, folded form with sharply defined origami lines, resulting in a contemporary appearance that is radically different to traditional rounded

surfaces that are a byproduct of other production techniques.

Individually numbered : The ECOPIXEL® technique randomly combines colored pixels in the magnificent Mendini-mix, creating a distinctive result every time. Each Chaise Longue is individually numbered with a special marker plate and comes with a certificate and numbered copy of the original ©2017 drawing.

'ALEX' is 100% recyclable and made of up to 55% recycled materials. ECOPIXEL® aims to use materials that will continue to be part of the recycling loop. Withstanding temperatures from -10°C up to +50°C means ECOPIXEL® is suitable for both INDOOR and OUTDOOR environments.

COLLABORATIONS

ECOPIXEL has been commissioned for the production of display material for different brands with corporate colors and customized textures. Forms eventually defined by its sense of functionality & ultra-clean lines

RECYCLED AWARENESS

PLASTICS waste = RAW material

During the awareness process on how to reuse plastic waste at our hometown school for years we have our kids collect bottle taps. They never knew what has always happened with these taps, and so we thought it could be educating addressing the “taps” to a project that could actually come back to the school, to show the kids what can really be done with waste, rather than collecting without ever knowing what happens with it.

DESIGN BY

Kindergarten Students
PORTO VALTRAVAGLIA, ITALY

Since the school needed new washbasins ECOPIXEL was asked if the taps could become washbasins? After a few prototypes (and drawings we made with the kids) ECOPIXEL managed to create new washbasins made from the plastic waste the kids collected themselves. As a result the kid-students now collect taps and other plastic waste with much more pleasure and purpose than ever before.

ECOPIXEL COLLABORATION

-O-XYGEN targets today’s youth who want to express their personal attitude through modern wearing apparel, communicating recycled plastics as a lifestyle.

MAKE RECOGNIZABLE PRODUCTS TROUGH DESIGN AND PRINTS

“O” decide to design with materials that are made to be made again from materials that are safe and renewable, are worn more, and can be easily recovered, rented and resold at the end of their use, never ending up as waste.

ECOPIXEL engaged in the production of accessories “O”. Three-dimensional objects truly intended to be preserved indefinitely.
