

1. Every ECOPIXEL product is unique

ECOPIXEL products are manufactured from recycled and recyclable plastics.

Unlike virgin plastic, recycled materials naturally contain small variations in color composition. These variations are not imperfections; they are the visible expression of the material's previous life and one of the characteristics that make every ECOPIXEL object unique.

No two products are ever exactly identical.

2. About our STANDARD Collection

The ECOPIXEL STANDARD collection is produced from carefully selected recycled plastic streams.

Each production batch follows a defined ECOPIXEL color code (for example **eco-016 TAPS**), however the exact proportions of the recycled sources available at the time of production may vary naturally.

As a result, future production batches may show slight differences in hue, saturation or color distribution while remaining faithful to the original color family.

For example, a future eco-016 TAPS batch may contain a higher percentage of orange bottle caps than previous productions, resulting in a warmer appearance.

This is a natural consequence of working with authentic recycled materials.

3. Color Consistency

Products manufactured within the same production batch will present a consistent color composition.

Products manufactured in different production batches may show slight visual differences.

For projects requiring identical color reproduction over time, ECOPIXEL offers dedicated color programs using our pigmented collections and customized production.

4. This is not a defect

Small variations in color, pixel distribution and texture are an inherent characteristic of ECOPIXEL materials.

They should not be considered manufacturing defects, but evidence of an authentic recycled production process.

Each object carries its own material identity.

5. Custom Production

For projects requiring long-term color continuity, exclusive colors, or guaranteed batch consistency, ECOPIXEL offers:

- Reserved production batches
- Exclusive color development
- Batch reservation
- Material archiving
- Dedicated production planning

This service is recommended for architects, furniture manufacturers, retail chains and long-term collections.

6. Circular by Nature

ECOPIXEL materials are designed to remain within the circular economy.

Every product is manufactured from recycled plastic and can be recycled again at the end of its life, contributing to a responsible material cycle.

ECOPIXEL COLOR POLICY

STANDARD Collection

- ✓ Lowest environmental impact
 - ✓ Lowest price
 - ✓ Natural batch variations
-

PIGMENTED Collections

(Terracota, Encanto, Guajira, Freud, Maroon.)

- ✓ Controlled pigments
 - ✓ Higher color consistency
 - ✓ Recommended for long-term collections
-

CUSTOM Colors

- ✓ Exclusive production
- ✓ Reserved material
- ✓ Highest color accuracy
- ✓ Batch reservation possible
